Luca Bertaggia

Innovation & automation

Research designer and developer of AI solutions for optimising administrative workflows.

```
// my mission
```

Turning bureaucratic complexity into digital efficiency through coding and AI.

python

node.js

llm · rag

automation

Who I am

Academic background and a path that goes beyond degrees.

Master's Degree

Advanced Sport Sciences and Techniques — University of Turin. Focus on scientific research and data analysis.

- completed
- research
- data analysis

Computer Science – UniTO

Command of software architecture and application development.

- in progress
- software design

Erasmus+ ×2

Universidad de Almería (Spain).
Research in a multicultural setting.

Publication

Co-author on post-pandemic wellbeing, 15th SIPI Conference.

Multilingualism

Native Italian, English and Spanish (B2/C1).

Entrepreneurship

Creator of fid.ai and co-creator of Sunlyze.

What I know

Three areas of expertise, one pipeline: from the browser to the model.

Automation

Google Apps Script for end-to-end optimisation of University of Turin processes.

apps-script

drive api

sheets

Coding

Python with Playwright, C and Node.js for browser automation and backend.

python

node.js

C

playwright

Data & AI

LLM, RAG, CLI and API: from the prompt to production integration.

llm

rag

cli

api

```
$ stack --list
```

```
python · playwright · node.js · C · google-apps-script · docker · rest-api · oauth2 · llm-apis
```

// 03 projects

My work

Three key projects that tell the story of my work.

01

E2E Automation

From fragmented manual handling to an integrated ecosystem: Opening → Distribution → Closing, with autonomous agents that remove manual work.

apps-script

drive

cli

02

UnitoClaw

Autonomous agent with a Router-Executor architecture (Mistral + Claude) for complex administrative tasks, web scraping, file handling and portal interaction.

mistral

claude

playwright

03

RAG Chatbot

35 GB of email (~60k records) turned into a knowledge base of 85 operating rules, with a GDPR pipeline and a chatbot authenticated via OAuth 2.0.

rag

gdpr

oauth 2.0

// details of the three projects in the following slides →

// 04 project_01

E2E Automation

Opening

Distribution

Closing

Document processing

Dynamic .doc → PDF conversion and archiving on Google Drive with an automatic naming convention.

Drive cataloguer

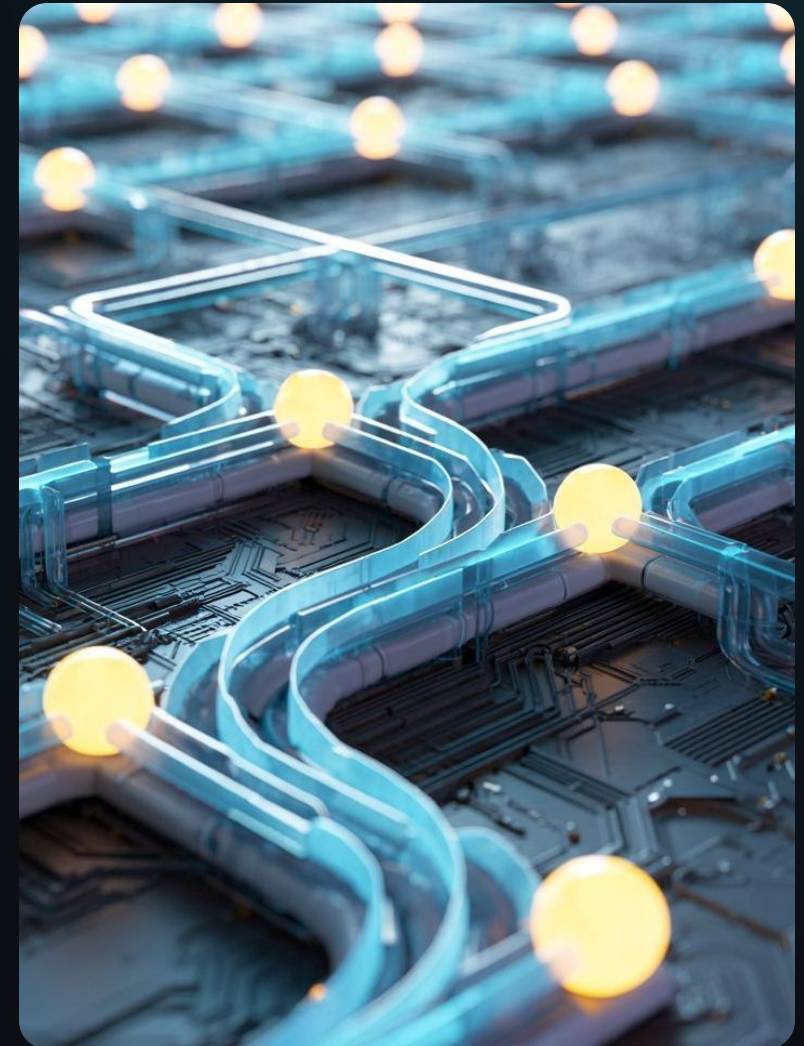

Monthly recursive scan that regenerates the full project map.

90%

of the workload handled
by the autonomous agent

Human-in-the-Loop

The operator steps in only for critical decisions and final checkpoints, with exception handling via CLI.

UnitoC^law

Dual-intelligence **Router-Executor** architecture: one model classifies, the other executes.

Institutional portals

Advanced interaction with myUnito and the university portals.

Contextual dialogue

Clear communication with the user while tasks run.

Multimodal handling

Excel, PDF and structured documents in the same flow.

Guided experience

A smooth, intuitive interface to guide actions and decisions.

RAG Chatbot

35 GB

of raw email

~60k

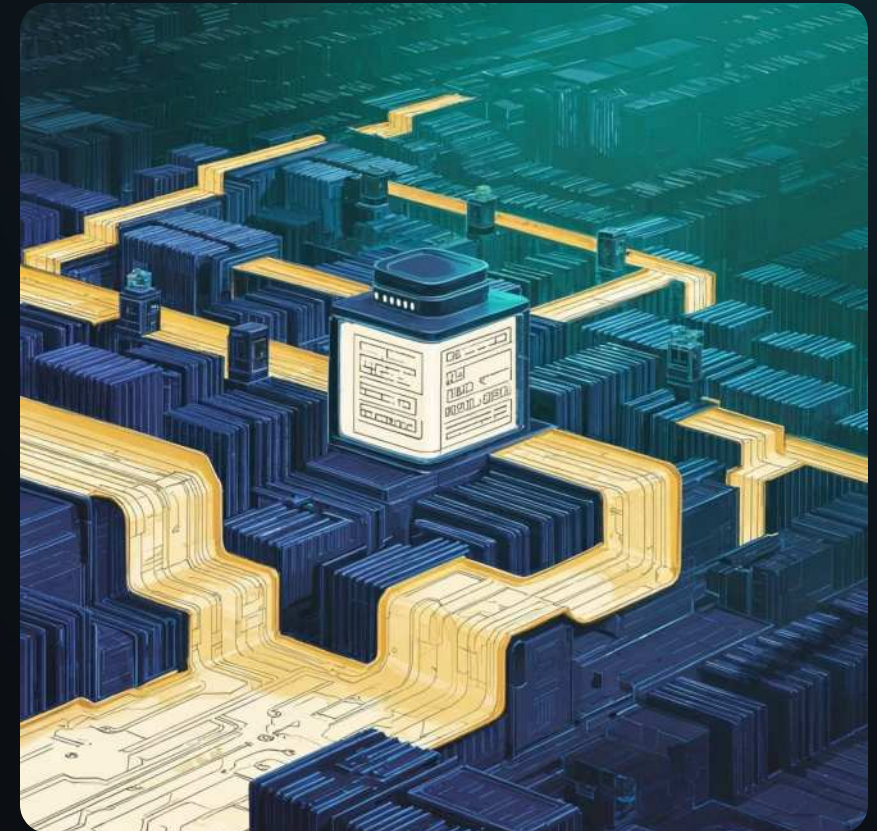

records processed

85

operating rules

```
$ rag-pipeline --status
```

```
01  ingest      35 GB of email, ~60k records normalised
02  gdpr        custom anonymisation pipeline
03  knowledge   85 structured operating rules
04  serve       OAuth 2.0 chatbot, real-time answers
```

Knowledge base queried in real time, access via OAuth 2.0.

Infrastructure, security and portability

A system built to stand on its own — and to grow without rewrites.

Cloud & DevOps

Deployment on Hugging Face Spaces with Docker and automatic fallback between providers.

`docker`

`hf spaces`

Security & Stability

Redundant architecture and continuous monitoring. Modular skills, scalable without touching the core.

`monitoring`

`modular`

Technical Mentorship

Technical documentation (e.g. Linux setup on VirtualBox) for onboarding non-technical staff.

`docs`

`onboarding`

```
$ providers --fallback
```

```
gemini → groq → anthropic      monitored uptime • no downtime on critical tasks
```

// 08 contact

Let's build together

Got a process to reinvent? Let's talk.

// services

AI design

Custom autonomous agents and RAG systems.

Process optimisation

Python and Google Apps Script for administrative workflows.

Technical consulting

A bridge between business needs and software solutions.
